Please find below and/or attached an Office communication concerning this application or proceeding.

224

Office Action Summary	Application No. 09/678,056	Applicant(s) NEEDHAM ET AL.	
	Examiner Wen-Tai Lin	Art Unit 2154	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 April 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-21 are presented for examination.
2. Claim 8 is objected to because the amendment did not follow the MPEP 714 Section III requiring changes be marked up by striking through for deletion and underlining for addition.
3. The text of those sections of Title 35, USC code not included in this action can be found in the prior Office Action.

Claim Rejections - 35 USC § 102

4. Claims 1-7, 11 and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Mysore [U.S. Pat. No. 6304558].
5. As to claims 1-7, 11 and 18, Mysore teaches the invention as claimed including:
a dispatch communication network comprising:
 - a group of hosts of a plurality of communication hosts [e.g., 122, 124, 126, Fig.1];

Art Unit: 2154

- a dispatch call server [102, 112 or 116, Fig.1] configured to arbitrate internet protocol (IP) communication among the group [Abstract],

wherein:

- one host of the group at a time is allowed to transmit IP communications comprising voice communications to the other hosts of the group [Fig.2; note that this is an inherent feature of the dispatch controller, dispatch manager or dispatch gateway because at any moment of time only a signal coming from one signal source is being transmitted, whether it be in natural voice format or in IP data packet format];
- the dispatch call server is configured to receive unicast dispatch communication data from one or more hosts of the group of hosts and to transmit the dispatch communication data to one or more destinations over an IP network in an IP multicast format [col.2, lines 17-28 and 45-63]; and
- the dispatch communication data comprises data representative of speech.

6. Claims 1-2, 4-7, 11, 17-19 and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Yonemoto et al.[U.S. Pat. No. 6298239].

7. As to claims 1-2 and 4-7, Yonemoto teaches the invention as claimed including:
a dispatch communication network comprising:

- a plurality of communication hosts [Figs.1, 7 & 12; col.12, lines 61-67]; and

Art Unit: 2154

- a dispatch call server configured to arbitrate internet protocol (IP) communication among a group of hosts of the plurality of hosts [Fig.12; col.15, lines 44-50],

wherein:

- one host of the group at a time is allowed to transmit IP communications comprising voice communications to the other hosts of the group [Fig.12; note that this is an inherent feature of the information transmission control apparatus 3000 and the information provider apparatus; i.e., whether it be in natural voice format or in IP data packet format, only one signal from a single source at a time is being transmitted]; and
- the dispatch call server is configured to receive unicast dispatch communication data from one or more hosts of the group of hosts and to transmit the dispatch communication data to one or more destinations over an IP network in an IP multicast format [i.e., broadcasting to a selected group of users such as 3100-3104 of Fig.12] or configured to transmit the dispatch call data in an IP unicast format [e.g., transmission between 3200 and 3000 of Fig. 12 is via unicast format].

8. As to claims 11, 17-18 and 21 since the features of these claims can also be found in claims 1-2 and 4-7, they are rejected for the same reasons set forth in the rejection of claims 1-2 and 4-7 above.

Art Unit: 2154

9. As to claim 19, Yonemoto further teaches: determining a first wait time for communication from the one host; waiting a time at least equal to the first wait time; and after the first wait time, accepting transmissions from the one host [col.2, line 46 – col.3, line 6].

Claim Rejections - 35 USC § 103

10. Claims 3, 8 and 12-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yonemoto et al. (hereafter "Yonemoto") [U.S. Pat. No. 6298239], as applied to claims 1-2, 4-7, 11, 17-19 and 21 above.

11. As to claim 3, Yonemoto's system directs information to groups of pagers. Yonemoto does not specifically teach that the dispatch communication data comprises data representative of speech.

However voice-based information using the Internet as communication medium is well known in the art.

It would have been obvious to one of ordinary skill in the art at the time the invention was made that Yonemoto's call-group system may include voice data because by doing so the pagers of Yonemoto's system may be easily extended to cellular phones, which may directly receive voice message, thereby greatly advancing the application of Yonemoto's system.

12. As to claim 8, Yonemoto further teaches that the dispatch call server is configured to arbitrate communication among the group of hosts based on transmission delays established for each of the one or more transmitting hosts.

Yonemoto does not specifically teach that the delays are normalized transmission delays or normalized round trip time.

However, it is well known that delay introduced by a transmission medium is not constant all the time. Thus it is obvious that the delay value must be based on a normalized measurement (i.e., averaging out of a plurality of measurement), because using a normalized value minimizes the error that may arise as a result of environmental uncertainty.

13. As to claims 12-13, since the features of these claims can also be found in claims 1-8 and 11, they are rejected for the same reasons set forth in the rejection of claims 1-8 and 11 above.

14. Claims 9-10, 14-16 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yonemoto et al.(hereafter "Yonemoto")[U.S. Pat. No. 6298239], as applied to claims 1-8, 11-13, 17-19 and 21 above, further in view of Lynk, Jr. et al.(hereafter "Lynk")[U.S. Pat. No. 4012597].

Art Unit: 2154

15. As to claim 9, Lynk further teaches that the dispatch call server is configured to arbitrate communication among the group of hosts based on priorities assigned to the one or more transmitting hosts [Lynk: Abstract].

16. As to claim 10, Yonemoto does not specifically teach that the dispatch call server is configured to select one transmitting host for communication and to convey a busy control signal to other hosts of the transmitting hosts.

However, Lynk teaches that when a transmission request is not granted, a busy signal is transmitted to the requester (e.g., start talking).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply Lynk's busy signals to Yonemoto's requesters who are waiting for their turns to talk, because by doing so the requesters would know when to start talking without having to try over and over again.

17. As to claim 16, Yonemoto and Lynk do not specifically teach discarding the dispatch call data from the other transmitting hosts.

However, since Yonemoto's and Lynk's could not handle simultaneously transmitted data, it is obvious that one option is to select one that has designated higher priority and discard the other ones (in particular when the system is not equipped to holding simultaneously transmitted data for later dispatching), because this is a simpler way of resolving the conflict.

Art Unit: 2154

18. As to claims 14-15 and 20, since the features of these claims can also be found in claims 1-13, 16-19 and 21 they are rejected for the same reasons set forth in the rejection of claims 1-13, 16-19 and 21 above.

19. Regarding Applicant's arguments/remarks filed on 4/19/2004: it is noted that in the telephone interview held on April 15, 2004, the examiner's comments were directed to overcoming the prior art of Maher. In the current office action, Mysore is a new-found prior art, while a large part of the rejections based on Yonemoto and/or Lynk remain due to undisputed response from the previous office action. In comparison with Applicant's proposed amendment, it is noted that Applicant dropped the wording "among contending" from the proposed amendment, which, in the examiner's view, has broadened claim language. Furthermore, in the current amendment Applicant does not address the issue that was raised by the examiner at the time of interview that an Internet router or transmitter also needs to arbitrate among contending packets because it could only transmit one packet at a time.

20. Applicant's arguments with respect to claims 1-21 on 4/19/2004 have been considered but are moot in view of the new ground(s) of rejection.

21. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP §

Art Unit: 2154

706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wen-Tai Lin whose telephone number is (703)305-4875. The examiner can normally be reached on Monday-Friday(8:00-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Follansbee can be reached on (703)305-8498. The fax phone numbers for the organization where this application or proceeding is assigned are as follows:

(703)872-9306 for official communications; and

(703)746-5516 for status inquires draft communication.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)305-3900.

Wen-Tai Lin
